OpenDeploy Reporter

Examine.
valuate.
nergize.  **Efficiency**

Do you have to go through a long list of log files and wade through long text to see what files were deployed or what happened to the deployment scheduled 2 days ago? OpenDeploy Reporter can provide this information and much more with the click of a button.

OpenDeploy Reporter is tool that provides interactive and detailed reporting on the Interwoven's OpenDeploy activity.

MAIN FEATURES

- ▶ Real time reporting.
- ▶ User can filter successful/failed deployments.
- ▶ Deployed files/Failed Files can be listed.
- ▶ Error messages for failed deployments can be viewed both at deployment level and file level.
- ▶ Custom reports can be generated using the deployment data stored in the database.

BENEFITS

- ▶ Full control over the deployment activity.
- ▶ Easy identification of failed deployments.
- ▶ Auditing of past deployments.

PLATFORMS

- ▶ OpenDeploy 4.0 – 6.5.1
- ▶ Windows NT, 2000
- ▶ Solaris 2.6–2.8
