

TeamSite Value Added Solutions

Interwoven ToolKit

Interwoven toolkit helps you extract more functionality out of TeamSite without investing heavily in custom development.

- ▶ **Relational Content Manager:** for managing relational rich data using TeamSite
- ▶ **Content Migration:** A set of utilities for migrating content from various sources into TeamSite
- ▶ **Image Browser:** For easy browsing and selection of images
- ▶ **Site Generator:** Tool for regenerating the site in various combinations
- ▶ **Lock Manager:** Easy Interface for managing locks across branches
- ▶ **Workflow Library:** A library of reusable workflow components to quickly build complex workflows

Workflow Reporter

Workflow Reporter is a reporting tool for generating reports on past and present workflows in TeamSite. Main features of the product are:

- ▶ **Virtually all the information in a workflow up to the task level is captured into a database.**
- ▶ **Quick Reports** are provided for getting a snapshot of the current jobs and tasks and task load for users.
- ▶ **Custom Reports** can be generated for Jobs and tasks based on all possible combinations of workflow parameters. Job Name, Task Name, Owner, creator, files, start time, end time, task type etc.
- ▶ **Drill-down feature** to get more information on search results 4 levels of drill-down to get virtually any information on a job/task.
- ▶ **Results can be summarized** to get statistical information on work done in the past and present. Example: Number of "Author_Assignment" jobs done in the last 6 months.
